

A mobile-optimised school meal ordering platform that allows parents and carers to order and pay for their children's school meals simply and easily. For schools, the platform drives engagement and uptake of school meals.

The Outcomes

Introducing the school meal ordering platform provides a tool that offers full transparency of meal orders and helps to control dietary needs; with a growing number of children with food allergies, this reassures both parents and the school that every precaution is being taken. The platform will also reduce waste and improve overall efficiencies as well as provide automated debt management tools

Other features include...

- ▶ Management of different menus and tariffs for various locations and outlets
- ▶ Classroom whiteboard ordering with students
- ▶ The ability to showcase menus and associated dietary flags
- ▶ Immediate payment that helps automate debt management
- ▶ Access to a full reporting suite that also manages orders

Many education settings are looking at new ways of improving efficiencies through the reduction of waste and by driving meal uptake and engagement. Our school meal ordering system supports both objectives with all the necessary support, advice, training and after care that will ensure success following implementation.

Platform offered through a Litmus Smart Partnership with Bluerunner Solutions
